

Boom Lift Training Richmond Hill

Boom Lift Training Richmond Hill - Elevated work platforms, likewise referred to as aerial platforms, enable workers to perform tasks at heights which would otherwise be inaccessible. There are different kinds of lifts intended for different site conditions and applications. If operated carelessly, elevated work platforms can cause serious injury or fatality. The most common causes of related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators should be completely trained in techniques to prevent accidents during the operation of lifts.

The Aerial Lift Safety program provides needed resources to be able to help those needing to learn how to operate these devices more effectively. Through the program, participants would receive thorough instruction. Kinds of lift covered comprise boom supported, scissor and articulating aerial lifts. The video presents the correct procedures operators should follow. Instruction focuses on protection against falls, pre-operational inspection, safe driving procedure and stability of the device.

The course addresses equipment reliability and employee safety. All instructional materials are compliant with provincial, state and Government agency regulations and requirements. Training techniques and course management would be taught. The trainer will likewise know the technical aspects of aerial lift safety.

Both classroom training and practical training are components of the Aerial Platform/Boom Truck Training course. Both sessions should be successfully completed for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms could be positioned completely beyond the base of the machine. The theoretical training component is nearly the same for both types. The practical part of the training can be finished more quickly if only one kind of machine is used.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to efficiently use elevating work platforms whilst decreasing the possibilities of an expensive accident in the workplace. Trainees will review of applicable rules and company policies, discuss Due Diligence, review Criminal Negligence and consequences to employers, trainers, supervisors and employees. Participants will study equipment features, operating procedures, stability, parking and fueling/charging procedures. Site-specific safety concerns would be dealt with.
